QUICK DRAIN®

QUICK DRAIN®

FAST DRAINING, NO WAITING

Our patented QuickDrain® allows you to exit your walk-in bathtub when you're ready, eliminating the wait time for water to drain before you can open the tub door and step out. Simply activate the QuickDrain® fast water removal system when you've finished and the water is rapidly pumped from the tub in just a few minutes.

8X FASTER

The QuickDrain® drains water from your tub 8 times faster than conventional systems. This patented system is equipped with a pump, safety suction and on/off electronic control that allows you to activate the drain with the touch of a button. And since this system ties into the manual drain assembly, with electrical plug directly into the wall outlet (in the same way as the whirlpool pump), no additional plumbing is required.
